- 111 1 20cm (8") vase of Tulips, one variety, three blooms

#### **Definitions of classes of Auricula, Polyanthus and Primrose**

The term 'Auricula', as used in classes 105-107, applies to the florist's forms and is separate from Primulas belonging to the Auricula Section. The latter includes *P. auricula*, its varieties, and such well known hybrids as *P. 'Linda Pope'* that are the subject of classes in Sections I and II.

Show Auriculas are either edge or self-coloured. They invariably have white paste centres.

Alpine Auriculas have pips of one colour, though of varying shades of that colour, the deeper shade towards the centre, the paler towards the edge. No farina is to be found on any part of an Alpine Auricula. The centres may be either gold or cream-coloured.

Border or garden Auriculas, are somewhat similar to alpine Auriculas, but the colour shading is much less definite. They are coarser plants than alpine varieties, and farina may be found on foliage or flower scapes.

The plant known as *P. 'Barrowby Gem'* is a Polyanthus, and the group covered by the name Juliae hybrids should be classed as primroses; *P. 'Garryarde Guinevere'* is a Polyanthus.

Members who are in doubt as to which classes their exhibits belong should consult the show secretary.
