The SRGC is most grateful to Staff from UBC, particularly Daniel Mosquin and Eric La Fontaine, for their assistance in providing this information to the Archibald Archive.

The UBC Botanical Garden and Centre for Plant Research was established in 1916 and is the oldest continuously operating University based botanical garden in Canada.

It comprises approximately 78 acres, or 31.5 hectares. Major components are Alpine, Asian, Food, Native and Physic gardens. The Botanical Garden cultivates and displays significant plant groups, such as Acer, Clematis, Epimedium, Cornus, Eucalyptus, Hebe, Lindera, Lardizabalaceae, Magnolia, Rhododendron, Sorbus, Styracaceae, BC native flora, alpinas and Asian flora. Their mandate includes providing plants and plant materials for academic study and research (based primarily on germplasm of documented wild origin), using plants to create attractive public displays, and providing the public with new plants through partnerships with local horticulture industry.

University of British Columbia Botanical Garden curates a collection of ca. 12 000 plants representing approximately 8000 taxa from temperate regions around the world. Temperate forest plants of British Columbia, eastern North America and Asia are curated in woodland gardens, while a classic alpine garden displays the diverse flora of high-altitude regions of the world.

**The following list is of accessions from JCA/JJA collections to the Botanical Gardens of the University of British Columbia.**

### **Archibald Accessions in the UBC Bot. Gdn:**

176 accessions over the years from 1973. 42 shown as still alive. The list is sorted alphabetically, with dead accessions first, live last. There is a column of catalogue or collection numbers.
